2 Identification & Intended Use

2.1 Identification
Medical device manufactured in Switzerland by Bien-Air Dental SA.

Type
Turbine type high-speed handpiece. Unit supplied by a hose, via a special ISO 9168 coupling. Push-button bur locking with anti-heating system. Ceramic ball bearings, 4 mixed sprays for TORNADO and TORNADO S, 3 mixed sprays for TORNADO X.

2.2 Classification
Class IIa according to European Directive 93/42/EEC relating to medical devices. This medical device complies with the legislation in force.

2.3 Intended use
Product intended for professional use only. It is intended for general dentistry work. Any use other than that for which this medical device is intended is prohibited and may prove dangerous.

⚠️ CAUTION
The device must not be used if any open lesions or damaged soft tissue are present or if a recent extraction has taken place. The air current could propel infected material into the wounds, causing infection and a risk of embolism.
3 Precautions for use

This medical device accessory must be used by a competent person, in particular in compliance with the legal provisions in force regarding occupational safety, health and accident prevention measures, and these instructions for use.

In accordance with these provisions, the user is responsible for ensuring he or she only uses devices which are in perfect working order.

In the event of irregular operation, excessive vibrations, abnormal heating or other signs suggesting that the device is malfunctioning, work must be suspended immediately.

In this case, contact a repair centre approved by Bien-Air Dental SA.

⚠️ CAUTION
Install the device on an appropriate outlet to protect against the risk of injury or infection.

⚠️ CAUTION
Medical personnel using or performing maintenance on medical devices that are contaminated or potentially contaminated must comply with universal precautions, in particular the wearing of personal protective equipment (gloves, goggles, etc.). Pointed and sharp instruments should be handled with great care.

⚠️ CAUTION
It is essential to use dry, purified compressed air in order to ensure the long working life of the device. Maintain the quality of the air and the water by regular maintenance of the compressor and the filtration systems. The use of unfiltered hard water will lead to early blockage of the tubes, connectors and spray cones.

**Note:** Using unfiltered hard water will speed up blockage of the hoses, couplings and spray diffusers.

**Note:** The technical specifications, illustrations and dimensions contained in these instructions are given merely as an indication. They may not give rise to any claim.

For any further information, please contact Bien-Air Dental SA at the address given on the back cover.
4 Description

4.1 Overview

FIG. 1
(1) Light output
(2) Bur (not supplied)
(3) Push-button
(4) Lubrimed greaser
(5) Cleaning wire

Electric power supply
VDC or VAC: 3.4 ±0.3 V. The power supply systems must be in compliance with IEC 60601-1 and IEC 60601-1-2 standards. Declaration by the manufacturer regarding electromagnetic compatibility: refer to the tables 9 EMC, on page 16.

Bur chuck

**FIG. 2**
Tip diameter 1.60 mm, type 3 as per ISO 1797-1; max length for short to long types 21 mm, code 4 to 5 as per ISO 6360-1 (max. working diam. 2 mm).

⚠️ **CAUTION**
Follow the guidelines for use, according to the bur manufacturer’s instructions. Never use a bur if the tip is not compliant, as there is a risk it can become detached during the procedure and injure the practitioner, and the patient or third parties.

5 Operation

5.1 Changing the bur

**FIG. 3**
Push-button bur locking.
1. Press the push-button and simultaneously pull the bur.
2. Press the push-button, insert the new bur until locked in place and release the push-button.
3. Check that the bur rotates freely and check it is locked by gently pushing and pulling the bur.

⚠️ **CAUTION**
Do not operate the device until a tool has been inserted in the chuck. To prevent the push-button from overheating, which could lead to burns, it must not be pressed accidentally when the instrument is rotating. Soft tissue (tongue, cheek, lips, etc.) must be protected by moving it away using a retractor or dental mirror.

⚠️ **CAUTION**
Always ensure that the spray outlets are not obstructed.

⚠️ **CAUTION**
Always check that the bur is in place and rotates freely. If it does not, contact your usual supplier or Bien-Air Dental SA for repair.

5.2 Installing the turbine
The TORNADO LED, S LED and X LED are connected to a Unifix rotating quick-connect coupling (4-way) and the TORNADO LK, S LK, X LK to a coupling LK 4HL.
6.1.1 Precautions for maintenance
- Before first use and IMMEDIATELY after each procedure, clean, lubricate and sterilise the device.
- Before using for the first time and within a maximum of 30 minutes after each treatment, clean, disinfect and lubricate the instrument, then sterilise. Observing this procedure eliminates any blood, saliva or saline solution residues and prevents the transmission system from being blocked.
- Only instruments marked with the logo can be cleaned in a washer-disinfector machine.
- LK 4HL and Unifix couplings cannot be sterilised.
- Do not immerse in an ultrasonic cleaner.
- Only use original Bien-Air Dental SA maintenance products and parts or those recommended by Bien-Air Dental SA. Using other products or parts may cause faults during operation and/or void the warranty.

Chuck mechanism
Carry out cleaning-disinfection-sterilisation without a bur in the chuck mechanism.
6.1.2 Suitable maintenance products

Automatic cleaning-disinfection:
Low alkaline or enzymatic detergent recommended for cleaning in a washer-disinfector for dental or surgical instruments (pH 6 - 9.5).

Manual cleaning-disinfection:
- Spraynet.
- Aquacare.
- Detergent or detergent-disinfect (pH 6 - 9.5) recommended for cleaning-disinfection of dental or surgical instruments. Surface-active quaternary enzymatic/ammonium detergent.

⚠️ CAUTION
- Do not use detergents that are corrosive or contain chlorine, acetone aldehydes or bleach.
- Do not submerge in physiological liquid (NaCl).
- Check that both the steriliser and water used are clean. After each sterilisation cycle, remove the device from the sterilisation unit immediately to reduce the risk of corrosion.
6.2 Preliminary cleaning

Preparation
1. Disconnect the device from the coupling and remove the bur (FIG. 3 step 1).

6.2.1 Manual preliminary cleaning

⚠️ CAUTION
If there is a large amount of debris, clean the exterior of the device with disinfectant wipes. Observe the instructions given by the manufacturer.

FIG. 6

⚠️ CAUTION
Do not immerse in a disinfecting bath.

1. Unblock the spray tubes using the Bien-Air Dental SA cleaning wire. FIG. 5
2. With the aid of a clean and disinfected soft bristled brush, clean the external surface of the motor under running water (< 38°C).
3. Spray the exterior and interior of the device for 1 second with Spraynet. Carefully clean the surfaces using a soft cloth. Disinfectant wipes may also be used.

⚠️ CAUTION
Do not immerse in an ultrasonic bath.

4. Leave any liquid residue to drip-dry, then wipe the exterior with a paper towel or move onto the cleaning-disinfection step immediately (see 6.3 Cleaning-disinfection, on page 11).

6.3 Cleaning-disinfection

6.3.1 Manual cleaning/disinfection
1. Disinfect instruments with disinfectant solution recommended for disinfection of dental instruments. Observe the instructions given by the manufacturer.

⚠️ CAUTION
Do not immerse in a disinfectant bath.

6.3.2 Automatic cleaning-disinfection

⚠️ CAUTION
Only for device engraved with ⚠️

Washer-disinfector
Carry out automatic cleaning-disinfection using an approved washer-disinfector which complies with ISO standard 15883-1 (e.g. Miele G 7781/G 7881 or Steris Hamo LM-25).

Detergent and washing cycle
Use a low alkaline or enzymatic detergent recommended for cleaning in a washer-disinfector for dental or surgical instruments (pH 6 - 9.5) (e.g.: neodisher® mediclean). Select the washing cycle recommended for the device and compatible with the detergent manufacturer’s indications (e.g.: VARIO-TD).

⚠️ CAUTION
Never cool devices by rinsing them.
6.4 Lubrication
Before each sterilisation, or at least twice a day, lubricate with Lubrimed medical grease, or with Lubrifluid lubricant.

6.4.1 Verifying cleanliness
Visually inspect the device to ensure it is clean. If necessary, clean again using a soft brush.

6.4.2 Lubrication with Lubrimed

**FIG. 7**

1. Remove the cap from the yellow greaser and screw the knurled rear section whilst holding the front of the greaser until grease appears in the middle of the lubrication tip.
2. Remove the bur from the device.
3. Insert the tip of the greaser as far as it will go.
4. Screw the knurled rear section whilst holding the front of the greaser to inject the grease (the required amount corresponds to a ½ turn of the knurled rear section; use the markers).
5. Put the cap back on after use.

6.4.3 Lubrication with Lubrifluid

**FIG. 8**

1. Remove the bur from the device, and place the device in a cloth to collect the excess.
2. Select the appropriate end-piece.
3. Insert the end-piece of the can Lubrifluid in the rear of the device’s handle.
4. Actuate the spray for 1 second, and clean the excess oil on the exterior.
6.5 Sterilisation

⚠️ CAUTION
The quality of the sterilisation is highly dependent on how clean the instrument is. Only perfectly clean instruments may be sterilised.

⚠️ CAUTION
Do not use a sterilisation procedure other than the one described below.

Procedure
Enclose the device and its accessories in sterilisation bags which are large enough to ensure the items can move around, and which comply with the standards in force (e.g.: EN 868-5). Sterilise using steam on a class B cycle as per EN 13060 / ISO 17665-1.

Note: All Bien-Air Dental SA instruments are sterilisable in an autoclave up to 135°C. Duration: 3 or 18 minutes, depending on the national requirements in force.

6.6 Servicing
Never dismantle the device. For all servicing or repair operations, you are advised to contact your usual supplier or Bien-Air Dental SA directly.

Note: Bien-Air Dental SA recommends that the user has his or her dynamic devices checked or serviced every three years.
7 Packing & disposal

7.1 Transport and storage conditions
Temperature between -40°C and 70°C inclusive, relative humidity between 10 % and 100 %, atmospheric pressure between 50 kPa and 106 kPa.

Packing
Pack the device in packaging approved for steam sterilisation.

⚠️ CAUTION
If not to be used for a prolonged period, the device must be stored in a dry environment. Clean, lubricate and sterilise the instrument before reuse.

7.2 Disposal
![Recycle]
The disposal and/or recycling of materials must be performed in accordance with the legislation in force.

The TORNADO turbine must be recycled. Electrical and electronic equipment may contain dangerous substances which constitute health and environmental hazards. Users should return devices to their distributors or directly contact an approved body responsible for processing and recovering this type of equipment (European directive 2002/96/EC).

8 General information

8.1 Terms of guarantee
Bien-Air Dental SA grants the user a warranty covering any operating fault, or material or manufacturing defect.

The warranty period is:
- 24 months for TORNADO
- 60 months for TORNADO X from the date of invoicing.

In the event of a justified claim, Bien-Air Dental SA or its authorised representative will repair or replace the product free of charge.

All other claims of any kind whatsoever, particularly claims for damages, are excluded.

Bien-Air Dental SA cannot be held liable for damage or injury and the consequences thereof, resulting from:
- Excessive wear and tear
- Infrequent or improper use
- Failure to observe the servicing, assembly or maintenance instructions
- Damage caused by unusual chemical, electrical or electrolytic influences
- Faulty air, water or electrical connections.
**CAUTION**

The warranty becomes null and void if damage and its consequences result from incorrect servicing or modification by third parties not authorised by Bien-Air Dental SA. Warranty requests will only be taken into consideration if the product is accompanied by a copy of the invoice or delivery note. The following information must be clearly indicated: purchase date, product reference and serial number.

Electromagnetic Compatibility (technical description)
The intended EM environment (per IEC 60601-1-2 ed. 4.0) is Professional healthcare facility environment.

⚠️ CAUTION
The TORNADO turbine complies with the EMC requirements according to IEC 60601-1-2. Radio transmitting equipment, cellular phones, etc., should not be used in the immediate vicinity of the device, since this could affect its operation. The device is not suitable for being used close to high-frequency surgical equipment, magnetic resonance imaging (MRI) and other similar devices where the intensity of electromagnetic disturbances is high. In any case, ensure that no high frequency cables are routed above or near the device. If in doubt, contact a qualified technician or Bien-Air Dental SA.

Portable RF communications equipment (including peripherals such as antenna cables and external antennas) should be used no closer than 30 cm (12 inches) to any part of the TORNADO turbine, including cables specified by the manufacturer. Otherwise, degradation of the performance of this equipment could result.

⚠️ CAUTION
Use of this equipment adjacent to or stacked with other equipment should be avoided because it could result in improper operation. If such use is necessary, this equipment and the other equipment should be observed to verify that they are operating normally.

The TORNADO turbine is intended for use in the electromagnetic environment specified below. The customer or the user of the TORNADO turbine must ensure that it is actually used in such an environment.
The TORNADO turbine uses RF energy for its internal operation only. Therefore, its RF emissions are very low and are not likely to cause any interference in nearby electronic equipment.

The TORNADO turbine is suitable for use in any building, including residential buildings and those directly connected to the public low-voltage power supply network that supplies buildings used for residential purposes.

<td></td>
</tr>
</tbody>
</table>

1. Field strengths from fixed transmitters, such as base stations for radio (cellular/cordless) telephones and mobile field radios, amateur radios, AM and FM radio broadcasts and TV broadcasts cannot be predicted theoretically with accuracy. To assess the electromagnetic environment due to fixed RF transmitters, an electromagnetic site survey should be considered. If the measured field strength in the location in which the TORNADO turbine is used exceeds the RF compliance level mentioned above, the TORNADO turbine should be observed to verify that it is operating normally. If abnormal operation is observed, additional measures may be necessary, such as reorienting or relocating the TORNADO turbine.

*Note*: \( U_T \) is the AC mains voltage prior to application of the test level.

*Essential performance per IEC 60601-1*: The essential performance is to maintain the visual luminous intensity of the LED.

For transmitters rated at a maximum output power not listed above, the recommended separation distance \( d \) in meters (m) can be estimated using the equation applicable to the frequency of the transmitter, where \( P \) is the maximum output power rating of the transmitter in watts (W) according to the transmitter manufacturer.
